

GAVIN AUSTIN

+1 (262) 960-0427 ◇ Pleasant Prairie, WI ◇ gavinaustin70@gmail.com ◇ [Website](#)

EDUCATION

B.S. Computer Science and Data Science, UW-Madison | GPA: 3.5/4.0 Graduated May 2026

Coursework: Big Data Systems, Data Structures, Algorithms, Computer Architecture, Cybersecurity

Certifications: Google Cybersecurity Professional Certificate

SKILLS

Languages: Python, SQL, C#, Java, C, R, JavaScript, Bash

Libraries: Pandas, Scikit-learn, React.js, THREE.js, Python-docx

Tools: Docker, Spark, Kafka, Cassandra, GCP, Git, Linux, BigQuery (ETL & Database Mgmt)

EXPERIENCE

Data Analysis Intern

Summer 2024; Summer 2026 (Current)

AbbVie

North Chicago, IL

- Summer 2026: Created Python-based data workflows to curate and evaluate institutional records, confirming the quality and integrity of existing data sources by uncovering 75,000+ critical data errors
- Summer 2024: Developed and maintained a Python-based automation tool generating 50+ data reports per Agile sprint, collaborating with teams to save testers ~4 hours weekly
- Summer 2024: Applied optimization methods to design a similarity algorithm that matched 10,000+ records across 3 databases, improving data mapping and ETL pipeline speed by 76%

House Fellow

August 2024 - May 2026

UW-Madison Housing

Madison, WI

- Mentored 36+ students, exchanging straightforward information and enhancing problem-solving and resource navigation skills
- Designed and executed 20+ community events, collaborating with a team of 10+ House Fellows to support academic success and wellness
- Enforced university policies within standardized procedures, addressing 50+ incidents and contributing to a 95% compliance rate

PROJECTS

NFLIQ

- Built and maintained complex ETL data pipelines using Python, Pandas, and R to ingest, curate, and analyze millions of rows of real-time data from multiple sources
- Applied data structures and modeling methods (SMOTE, PCA) to extract insights and identify key performance metrics, achieving ~65% predictive accuracy to improve evaluation processes

LLM Git Analyzer

- Developed an automated data workflow utilizing bash scripting and Docker to extract and analyze code differences, utilizing open-source models to plan and generate insights
- Integrated an LLM to automatically parse outputs and present detailed data stories of codebase changes

OSINT Hacker Simulation

- Architected a terminal-based game in Unity (C#), featuring a custom simulated operating system to solve complex logic challenges
- Engineered a functional interface leveraging rigorous data parsing and ASCII rendering
